

Pharma Tech Industries Recognized in Every Category of *Life Science Leader's* "CMO Leadership Awards"

World's Largest Pharmaceutical Contract Manufacturer and Packager of Powder Products Receives Five "Solids" Recognitions

Royston, GA – Pharma Tech Industries (PTI), the largest pharmaceutical contract manufacturer and packager of powder products in the world, made it a clean sweep across the "Solids" categories of *Life Science Leader* magazine's 2011 "CMO Leadership Awards." PTI received recognition in each of the section's five categories: Accessibility, Productivity, Quality, Reliability and Regulatory Compliance.

The number of recognitions PTI received – the highest-possible – is indicative of a contract manufacturer that offers a broad scope of services that, often, make PTI the only vendor necessary for pharmaceutical companies. A Product Marketer for a global personal care products company said: "We recently transferred the sourcing of our powder bottles and closures to PTI as they already manufactured and packaged our product. Not only were there financial benefits to the move, but also significant savings in terms of sourcing oversight."

"We've become a turn-key operation for major pharmaceutical companies, and that trend will only intensify in the coming years," said Tee Noland, Director of Business Development for Pharma Tech Industries. "We not only handle their products manufacturing and packaging needs, we alleviate their need to handle multiple vendors – and in doing so we save our customers time, money and hassle."
